

- Azure LoadBalancing Services
- LoadBalancer
- Application Gateway
- Traffic Manager
- Frontdoor

- PAAS
- Key Vault
- Bastion

- 500 User
- 1000 User

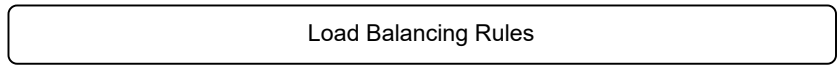

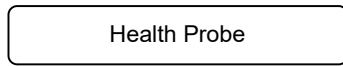

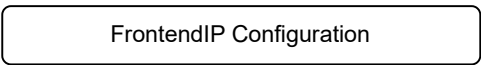

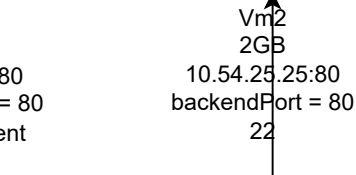

If there is no NSG on a VM, then all ports are open.

backendPort = The port on which app is running inside the vms
port = The port on which we want to get the traffic on loadbalancer.

- Prerequisites
- 2 VM Chahiye
- Nginx Setup

- Problems
- 1. Jyada application ke lie jyada public ip lgenge..
- 2. Web Application Firewall Missing

Inko solve karne ke lie aaega Application Gateway

Application Gateway/Ya kuch bhi Non-Prod me nahi bane aur prod environment me bane... Ternary Operator and count.

Assignment - Bastion , Keyvault using terraform
