

Pod ka kaam - uske andar ke container ko zinda rakhna...

1 container = 1 process

if nginx process dies
then container will also die

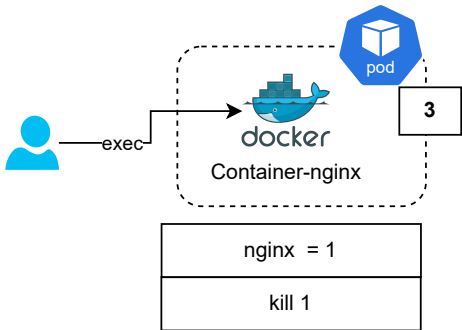

1 container = nginx process

nginx = pid 1

kill 1

docker run

Container amar ho gaya
pod ke karan...

kubectl exec POD -c CONTAINER COMMAND

Command banane ki vidhi...

1. small - constant

2. [] chokor dabba - optional

3. CAPITAL - jo change hoga

4. | matlab OR (ya to left ya to right)

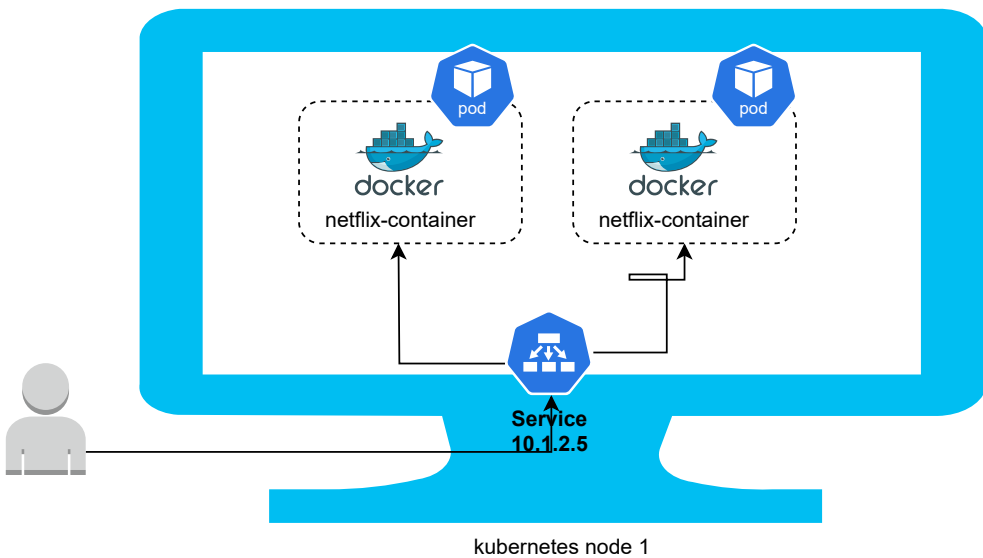

kubectl exec POD -c CONTAINER COMMAND

POD = **nginx-pod**

CONTAINER - **nginx**

COMMAND - bash

kubectl exec nginx-pod -c nginx -i -t -- bash
